To Whom It May Concern

PSSC Labs PowerWulf Cluster is the only ACTA-certified solution for running our Range Risk Analysis Tool (RRAT) software in multi-processor mode. Over 20 PSSC PowerWulf Clusters have been installed to run RRAT at various facilities. At this time, no other platform has been configured and tested to be compatible by ACTA Inc. The amount of time and cost to ensure RRAT software is functioning properly on a non-certified solution will be extensive resulting in significant additional development fees.

Regards,

Erik Larson

Vice-President and Chief Technical Officer
